

Resources

To create my project, I had to do a lot of research into regular expressions. Many of the resources available online were extremely confusing and made the task at hand seem daunting. This was until i found these two videos:

<https://www.youtube.com/watch?v=DRR9fOXkfRE> - this explains the RegEx literals.

<https://www.youtube.com/watch?v=62XY8JJxpYw> - this explains how to use RegEx.

Once I got started with these, i found this:

<http://www.regexplanet.com/advanced/java/index.html>

This website was a great resource for testing my Regular expression with test strings. This website was especially helpful in bug fixing, because it allowed me to know if my program's logic was flawed or if my regular expression was to blame.
